

1-edit .env file as below :

```
DB_CONNECTION=mysql
APP_NAME=appname
APP_ENV=production
APP_KEY=base64key
APP_DEBUG=false
APP_URL=https://domain.com
DB_CONNECTION=mysql
DB_HOST=localhost
DB_PORT=3306
DB_DATABASE=dbname
DB_USERNAME=dbuser
DB_PASSWORD=dbuserpass
```

---

2-Run these artisan commands in cmd and project folder

```
php artisan key:generate
php artisan config:cache
php artisan config:clear
php artisan route:cache
php artisan serve
```

---

3-Now make a zip file of your local host folder and .sql of your db

4-Upload them in your shared hosting cpanel or directadmin

5-Check your php version to be the same as your local project is.

6-Move index from public folder to main folder

7-Now we need to **modify two lines** of the index.php.

Open **index.php** and change like this:

Remove ../ in these lines :

```
-----  
require __DIR__.'../vendor/autoload.php';  
-----  
$app = require_once __DIR__.'../bootstrap/app.php';
```

8-Finally move .htaccess from public folder to main folder

9-And change domain to new domain in that if necessary.

10-Remove "/public" in resources/views/
